## Product data sheet

Specifications
variable speed drive ATV32-0,37 kw - 200 V - 1 phase - with heat sink

ATV32H037M2
(!) Discontinued on: Nov 19, 2020
(!) End-of-service on: Dec 31, 2018

## (1) Discontinued

Main

| Range Of Product | Altivar 32 |
| :--- | :--- |
| Product Or Component Type | Variable speed drive |
| Product Destination | Synchronous motors <br> Asynchronous motors |
| Product Specific Application | Complex machines |
| Function Available | - |
| Assembly Style | With heat sink |
| Component Name | Class C2 EMC filter integrated |
| Emc Filter | 1 phase |
| Phase | $200 \ldots 240 \mathrm{~V}-15 \ldots . .10 \%$ |
| [Us] Rated Supply Voltage | $170 \ldots 264 \mathrm{~V}$ |
| Supply Voltage Limits | $50 \ldots 60 \mathrm{~Hz}-5 \ldots .5 \%$ |
| Supply Frequency | $47.5 \ldots 63 \mathrm{~Hz}$ |
| Network Frequency | $0.37 \mathrm{~kW} 200 \ldots 240 \mathrm{~V}$ |
| Motor Power Kw | $0.5 \mathrm{hp} 200 \ldots . .240 \mathrm{~V}$ |
| Maximum Horse Power Rating |  |

Complementary

| Line Current | 5 A 240 V 1 phase $0.37 \mathrm{~kW} / 0.5 \mathrm{hp}$ |
| :--- | :--- |
| 6 A 200 V 1 phase $0.37 \mathrm{~kW} / 0.5 \mathrm{hp}$ |  |
| Apparent Power | 1.2 kVA 240 V 1 phase $0.37 \mathrm{~kW} / 0.5 \mathrm{hp}$ |
| Prospective Line Isc | 1 kA 1 phase |
| Nominal Output Current | $3.3 \mathrm{~A} 4 \mathrm{kHz} 240 \mathrm{~V} 0.37 \mathrm{~kW} / 0.5 \mathrm{hp}$ |
| Maximum Transient Current | $5 \mathrm{~A} 60 \mathrm{~s} 0.37 \mathrm{~kW} / 0.5 \mathrm{hp}$ |
| Output Frequency | $0.0005 \ldots . . .599 \mathrm{kHz}$ |
| Nominal Switching Frequency | 4 kHz |
| Switching Frequency | $2 \ldots . .16 \mathrm{kHz}$ adjustable |
| Speed Range | $1 \ldots . .100 \mathrm{asynchronous} \mathrm{motor} \mathrm{in} \mathrm{open-loop} \mathrm{mode}$ |
| Speed Accuracy | $+/-10 \%$ of nominal slip 0.2 Tn to Tn |
| Torque Accuracy | $+/-15 \%$ |
| Transient Overtorque | $170 \ldots 200 \%$ |

Price is "List Price" and may be subject to a trade discount - check with your local distributor or retailer for actual price.

| Braking Torque | <= $170 \%$ with braking resistor |
| :---: | :---: |
| Asynchronous Motor Control Profile | Voltage/frequency ratio, 2 points <br> Flux vector control without sensor - Energy Saving, NoLoad law Voltage/frequency ratio - Energy Saving, quadratic U/f Voltage/frequency ratio, 5 points Flux vector control without sensor, standard |
| Synchronous Motor Control Profile | Vector control without sensor |

Dimensions Drawings

Size A

## Dimensions

$\frac{m m}{m}$

Mounting and Clearance

Mounting and Clearance

(1) Minimum value corresponding to thermal constraints. A 150 mm clearance may help to connect the ground.
(2) Optional GV2 circuit-breaker

Option: Protection Device, GV2 circuit-breaker

The drive is prepared to be equipped with an optional GV2 circuit-breaker.
The GV2 circuit-breaker is directly mounted on the drive. Mechanical and electrical link are made using the optional adapter. The options are supplied with detailed mounting instruction sheet.

NOTE: The product overall dimension, including GV2 adapter and EMC plate mounted, becomes 424 mm (16.7 in.)

(1) Ground screw (HS type $2-5 \times 12$ )

## Product data sheet

ATV32H037M2

Connections and Schema

## Connection Diagrams

Single or Three-phase Power Supply - Diagram with Line Contactor
Connection diagrams conforming to standards EN 954-1 category 1 and IEC/EN 61508 capacity SIL1, stopping category 0 in accordance with standard IEC/EN 60204-1.

(1) Line choke (if used)
(3) Fault relay contacts, for remote signaling of drive status

## Single or Three-phase Power Supply - Diagram with Switch Disconnect

Connection diagrams conforming to standards EN 954-1 category 1 and IEC/EN 61508 capacity SIL1, stopping category 0 in accordance with standard IEC/EN 60204-1.

(1) Line choke (if used)
(3) Fault relay contacts, for remote signaling of drive status

Diagram with Preventa Safety Module (Safe Torque Off Function)

## Product data sheet

Connection diagrams conforming to standards EN 954-1 category 3 and IEC/EN 61508 capacity SIL2, stopping category 0 in accordance with standard IEC/EN 60204-1.
When the emergency stop is activated, the drive power supply is cut immediately and the motor stops in freewheel, according to category 0 of standard IEC/EN 60204-1.
A contact on the Preventa XPS AC module must be inserted in the brake control circuit to engage it safely when the STO (Safe Torque Off) safety function is activated.

(1) Line choke (if used)
(2) It is essential to connect the shielding to the ground.
(3) Fault relay contacts, for remote signaling of drive status

The STO safety function integrated into the product can be used to implement an "EMERGENCY STOP" (IEC 60204-1) for category 0 stops.
With an additional, approved EMERGENCY STOP module, it is also possible to implement category 1 stops.

## STO function

The STO safety function is triggered via 2 redundant inputs. The circuits of the two inputs must be separate so that there are always two channels. The switching process must be simultaneous for both inputs (offset < 1 s ).
The power stage is disabled and an error message is generated. The motor can no longer generate torque and coasts down without braking. A restart is possible after resetting the error message with a "Fault Reset".
The power stage is disabled and an error message is generated if only one of the two inputs is switched off or if the time offset is too great. This error message can only be reset by switching off the product.

## Diagram without Preventa Safety Module

Connection diagrams conforming to standards EN 954-1 category 2 and IEC/EN 61508 capacity SIL1, stopping category 0 in accordance with standard IEC/EN 60204-1.
The connection diagram below is suitable for use with machines with a short freewheel stop time (machines with low inertia or high resistive torque)
When the emergency stop is activated, the drive power supply is cut immediately and the motor stops in freewheel, according to category 0 of standard IEC/EN 60204-1

(1) Line choke (if used)
(2) It is essential to connect the shielding to the ground.
(3) Fault relay contacts, for remote signaling of drive status

The STO safety function integrated into the product can be used to implement an "EMERGENCY STOP" (IEC 60204-1) for category 0 stops.

Control Connection Diagram in Source Mode

(1) Reference potentiometer SZ1RV1202 (2.2 k $\Omega$ ) or similar ( $10 \mathrm{k} \Omega$ maximum)

## Performance Curves

## Derating Curves

Derating curve for the nominal drive current ( In ) as a function of temperature and switching frequency.

X Switching frequency

Above 4 kHz , the drive will reduce the switching frequency automatically in the event of an excessive temperature rise

## Technical Description

## Sink / Source Switch Configuration (SW1)

The logic input switch (SW1) is used to adapt the operation of the logic inputs to the technology of the programmable controller outputs.
Switch SW1 set to "Source" position

Switch SW1 set to "Source" position and use of an external power supply for the LIs

Switch SW1 set to "Sink Int" position

Switch SW1 set to "Sink Ext" position
