Pressure switch

These devices are used in nearly all systems where there are fluids under pressure. They automatically control the energy levels by acting on the feeding of the motor-pumps. They are calibrated beforehand to the standard opening and closing pressure of the contacts, but they can be calibrated to diverse pressures by means of an adjustment device and the values that can be obtained are indicated in the table below.

Art. 660

tipo type	Campo di regolazione all'aumentare della pressione Range at rising pressure	Differenziale alla min. taratura at min. setting	Differential alla max. taratura at max. setting	Taratura di fabbrica Fatory setting
FTG 2	1.4-4.6	1.0-1.3	1.4-1.7	1.4-2.8
FSG 2	1.4-4.6	1.0-1.1	1.2-2.3	1.4-2.8
FYG 22	2.8-7.0	1.2-2.3	1.6-2.7	5.4-7.0
FYG 32	5.6-10.5	1.9-3.0	2.3-3.4	8.0-10.5

Art. 659

Art. 671
